Water playgrounds

EN

**Mechanics and water  
in a playful way**  
Water is pedagogically valuable.  
Water is physics to experience.  
But above all, water is a lot of fun!

**Robust, easy to clean  
and attractive**

Compared to wood, stainless steel water playgrounds are durable and weather resistant. Due to the colored paint and attention to detail, WASSPA's water playgrounds also look child-friendly and visually suitable.

**Craftsmanship creatively realized**  
With over 30 years of experience in blacksmithing and metal construction, we design your playground individually according to your ideas.

**Play, fun and safety**

Our water playgrounds are designed and manufactured according to DIN EN 1176-1. In addition, the individual elements are independently tested and thus receive the GS mark for tested safety.

Our certified playground inspectors (according to DIN 79161) are also happy to carry out the annual main inspection of your playground.

**Mobile water playground**

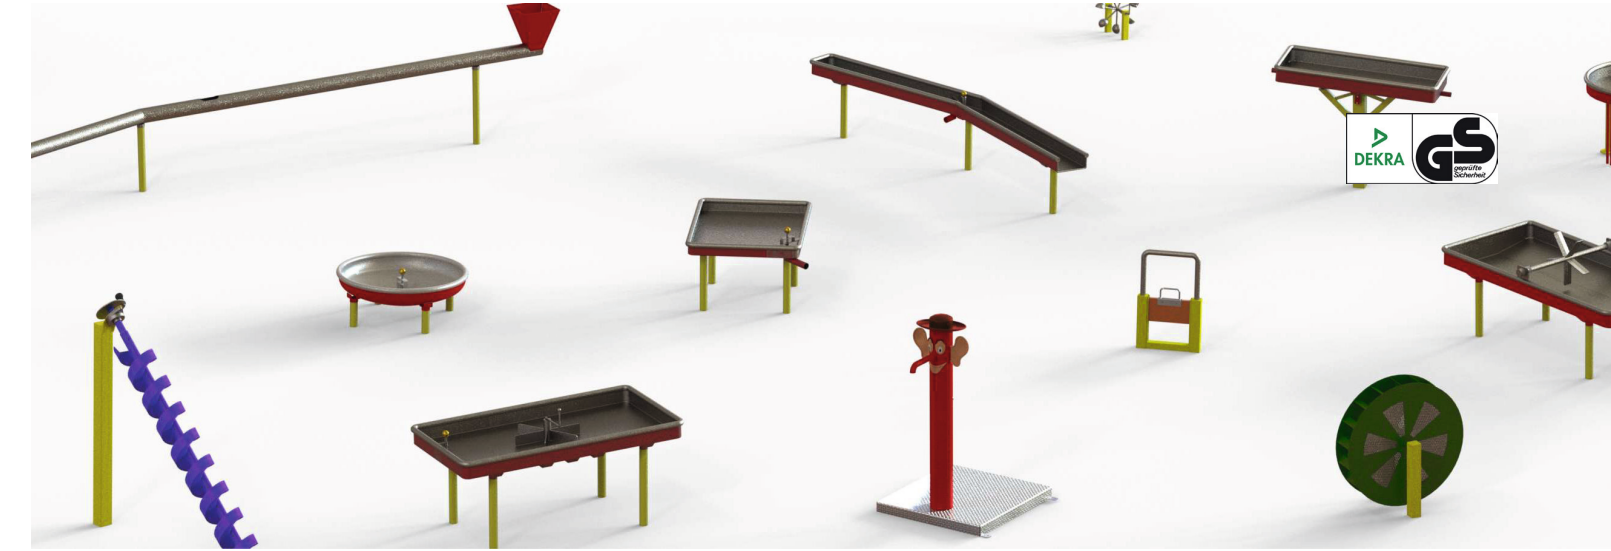

Our mobile water playground is a set of various elements that are placed, for example, on a lawn. Foundations and complex assembly are not necessary.

Due to the free placement, the location and arrangement of the water playground can be changed again and again, which provides additional play value. The water supply is provided by a garden hose with constant fresh water or as a circuit by regularly draining and replacing the water.

This system is particularly suitable for Kindergartens and day care centers.

Set mobile water playground

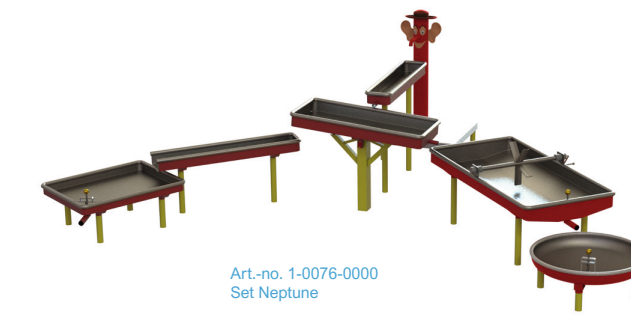

**Customized to your needs**

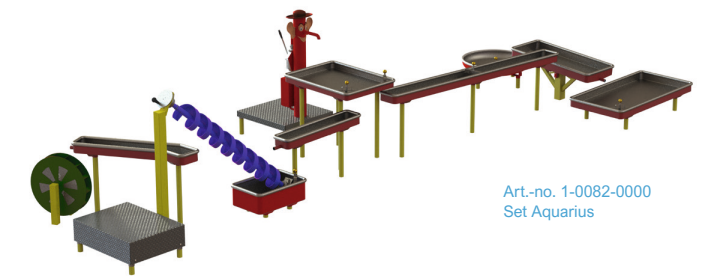

The fixed water playground is ideal for public playgrounds, swimming pools and bathing lakes, adventure gastronomy and children's hotels, as well as for animal and leisure parks.

From a few elements to large XL installations with handmade figures, we offer a wide range of play equipment around the theme of water. All water play elements have the GS mark and can be purchased individually or as a pre-configured set.

By training our metal construction professionals to become safe playground specialists and certified playground inspectors, we offer you the best possible expertise in the design, construction, fabrication, installation and inspection of our certified playground equipment.
